

## Host International Conference Calls - Collaborate Across Continents

### Now you can easily hold a teleconference with geographically diverse participants

With today's global economy, businesses need to use an international collaboration tool. A service that enables international conference calls between associates, vendors or a team regardless of where in the world the participants may be located.

*Shopping for the lowest rates is no longer enough.* It's now essential that a conference call service be effective, reliable AND economical. With over 10 years experience and a roster of domestic and international clients, AIT guarantees you'll be pleased with the international conference call plan and features.

This includes toll free access from 63 countries and 24 hour operator assistance. Many customers utilize the included free session recording feature that permits recording and download of an MP3 file, **absolutely free.**

### Guaranteed 24/7 Live operator support

This type of support is universally appreciated. All of our U.S. based operators are actually located at the bridge. This enables immediate solutions to any issues a customer may have. There's never a need to 'escalate' a call to another level nor will a customer be referred to a voice mail extension.

### Set up a conference call 3 ways

1. Global Toll Free Access. Provide your attendees a permanent list of International Toll Free numbers available **from** 63 countries.
2. Dial-Out to participants through our bridge. Use dial-out on a one-by-one basis or use the optional UBlast automatic group dial-out.
3. Operator dial-out. Utilize a variety of high touch operator services available to all customers.
