

Call Forwarding Virtual Number Redirect Calls to Any Phone Worldwide

How do you market your services in another country without a brick and mortar location in that country?

The answer: Global Call Forwarding also known as 'virtual number call forwarding'. Global Call Forwarding permits you to create a presence in another country without the need for a physical location in that country.

Businesses are reaching out to international markets by establishing a virtual presence in countries through the use of local and toll free phone numbers. A very important sales obstacle that a business must mitigate is the distance factor. Your potential customer might be located in the UK but your business is based in New York. Why not offer them local or toll free numbers in the UK that redirect their calls to your office in New York, at no cost to them?

Your customers are more likely to dial a free local or toll free number in their country rather than dialing a international long distance phone number with the associated fees. It can also be beneficial to create a local presence with a local phone number in a country or city in a market where you have determined that your company has a growing customer base or where you may want to provide, for example, a local customer service number, -a current practice among many international enterprises.

Advanced Forwarding—Time of Day Routing:

Have calls forwarded to an array of phone numbers based on the time of the day.

Roll Over Minutes:

Choose from four pricing plans plans. Pay by the minute or choose a monthly plan with included minutes that fits your particular usage pattern. The monthly plans include minutes and also come with an optional RollOver feature, which allows you to save your unused plan minutes for the future.

Sequential Forward:

Enter up to 4 'ring to' numbers to receive the call if the main number does not answer or if the line is occupied.

Customer Greeting:

Use your own special greeting to answer every call before ringing your phone. Example: "Welcome to aitelephone.com, please wait while we connect your call"

Forward Calls to any Phone Worldwide:

You can change your 'Ring To' number at any time through the convenient online control panel and receive your calls at any landline or mobile phone worldwide.
