Callback, also known as international callback, is a strategy for avoiding exorbitant long-distance charges imposed by most countries. By having a call reversed and initiated from within the United States, international calling costs can be significantly reduced.

Here's how a CALLback user makes a call:

1. A caller (for example, in Japan) dials his/her assigned U.S. access number and hangs up immediately upon hearing the first ring. This is a **free call** because it is incomplete.
2. Within 5 to 8 seconds our callback computer detects that the "access" number was called and sends the U.S. dial tone to the users designated callback number which may be in any country.
3. The caller now enters the desired destination phone number and the call is processed immediately at huge savings.

Usage charges are billed to the CALLback subscribers credit card at the end of the month. Customers can view account call details and monthly invoice online.

CALLback can be used from a fixed landline or cell phone. You can call **FROM** any country, **TO** any country using CALLback. Calls can be initiated using the Internet, email or telephone.

Example CALLback Rates - US\$ /minute

FROM:	TO:	\$/min
South Africa—Johannesburg	USA =	\$0.16
